

Dear Doctor Gupta

Januar 2018

Seven years ago, after learning that a club member had developed breast cancer, our club undertook a special project to express our empathy for her and for other women who have been victims of this disease. We decided on a plan to hand-sew „heart pillows“ for patients being treated in the breast cancer unit of the Ingolstadt General Hospital - the unit needs about 220-240 pillows per annum. I am happy to report that we have succeeded in making over 1500 of them to date. Professor Aydeniz, the Director of the Breast Cancer Unit, has stated that the physical and emotional support provided by the „heart pillows“ has made a memorable contribution to the post-operative care of patients on that unit. It is rewarding to know that our project has had such a beneficial effect. If you would like to obtain more information about the project, such as television interview and press releases please go to heartpillows-project IWC Ingolstadt
